

Upgrade your Volvo with an exclusive offer on Polestar Performance from £620

As Volvo Cars partner in motorsport, Polestar offer a Volvo authorised power upgrade that is sure to enhance your driving experience. After a quick software installation carried out by Marshall Volvo, you drive off loaded with more torque and horsepower.

Polestar Performance gives your Volvo more performance

Polestar Performance optimises the power and torque in your Volvo. It makes the car more agile and fun to drive and it increases safety in situations where you need extra performance, e.g. when overtaking, all this without increasing the fuel consumption or affecting your Volvo's Original Warranty.

The power optimisation is developed by Polestar's technicians who have optimised Volvo cars for racing circuits since 1996. Our skills are well documented in the results lists. Our long collaboration with Volvo now makes it possible to offer the power optimisation for your Volvo, installed by Marshall Volvo, while retaining the Original Warranty. You no longer need to take risks with "chip tuning" to achieve an enhanced driving experience.

Fuel consumption and the environment

A Volvo with the Polestar Performance package has the same certified fuel consumption as the standard version. This is possible thanks to our efficient tuning of the engine, which only increases the power output when it is needed, i.e. for overtaking, long uphill gradients or driving with heavy trailers.

This also means that the car's environmental impact remains unchanged, it is maintained within the limits for the certified emissions that are permitted. In practice it is fully possible to use Polestar's power optimisation to reduce fuel consumption slightly, if you drive in an environmentally sound manner and maintain an even speed with low engine load.

And now for a limited time available with a FREE 14 day trial

Speak to a Sales Consultant today to find out if the upgrade is compatible with your Volvo.
