

TURN EVERY UPDATE INTO AN UPTIME ADVANTAGE

DAF Over-the-Air software updates

DAF Over-the-Air technology enables your vehicles to stay up to date without interrupting your operations. Routine software updates are installed remotely with no workshop visit required, keeping your fleet running efficiently at all times.

Continuous improvements for your fleet

With DAF Over-the-Air (OTA) software updates, your fleet benefits from continuous improvements in performance, reliability and safety.

Your Benefits

- Always up to date and secure
- Continuous product improvements (e.g., injector control enhancements)
- No workshop visit needed, saving time and increasing uptime
- OTA updates are free of charge

How OTA works

1. Activate your PACCAR Connect Account

To enable OTA updates, PACCAR Connect Services must be activated for your vehicles.

This will give access to your PACCAR Connect Portal.

2. Receive a notification

When a new software update becomes available, a notification appears in the PACCAR Connect Portal.

3. Activate the update

Once the driver accepts the update, it's completed over the air without disrupting daily operations.

No workshop visit required.

What we ask from you

To ensure your fleet benefits from OTA updates, please:

- Provide consent for remote software updates.
- Ensure that PACCAR Connect Services are activated for your vehicles.

These small steps enable your fleet to receive continuous improvements automatically.

Need support?

Your DAF dealer will gladly assist with activation, consent status and update guidance.

Activate your PACCAR Connect account and keep your fleet performing at its best.
