

# New: TRP Air Bellows, tested by DAF

TRP now supplies aftermarket air bellows that are tested by DAF. This ensures OE-level quality and durability for older DAF trucks, with regulatory compliance and at a competitive price.

## Improved safety, longer lifetime

The axles of commercial trucks have to withstand extreme load fluctuations. Air bellows equalise suspension performance across axles to help ensure stability and balance for the vehicle and load, so improving driver safety and vehicle lifetime. That's why they need to be replaced periodically, depending on the usage and driving conditions.

## Perfect fit, easy installation

The new TRP Air Bellows are designed to closely match the original OE specifications and are a perfect fit for most DAF trucks. Calendared for consistency and reliability, the top and bottom crimping plates make for easy fitting to the chassis, simplifying installation. Check out the part numbers for your models here:

### TRP Air Bellow 1529738

BPW 05.429.43.20.0
